## Science Freethinking Atheism Humanism: September 2010

How important is that part of us and what is it exactly? Of course, he did say that. The second concerns the phylogenetic origin of aggression, which in humans involves brain mechanisms that are associated with anger and inhibition, the emotional expression of anger, and how aggressive actions are manifest. It could be said that both Daisy and I have been exhibiting learning behaviour.

### On Human Nature

For example, smooth chin is a recessive trait, which means that an individual will only display the smooth chin phenotype if they are homozygous for that recessive allele bb.

The second explored other characteristics that appear to have been shaped by natural selection: falling in love, smiling, and liking sweet things, to name only a few.

### The Role of the Biological Perspective in Psychology

These pressures have reached the point where scientists stating simple facts about how genes, biology and behaviors relate to each other are

accused of promoting ideas that are dangerous to society.
