

# Structural representation of multi-variable control systems.

## - - Multivariable variable

Description: -

-Structural representation of multi-variable control systems.

-Structural representation of multi-variable control systems.

Notes: Thesis (M.ApSc.) -- University of Toronto, 1961.

This edition was published in 1961

**On a useful functional representation of control system structure (Microform, 1988) [tech.radiozamaneh.com]**

Comparison element: Comparison element gives the difference between the reference Input and feedback signal. Model objects can represent single-input, single-output SISO systems or multiple-input, multiple-output MIMO systems.

## Control System

Control element: Control element decides what action to take for example, switch on or off when it receives an error signal 3.

## Control System

The method has been tested on a full-scale plant.

## Control System Mathematical Modelling and Representation of Physical System

Spring Force: A spring has potential energy. .

## Knowledge Representation in Artificial Intelligence

It is common to specify the steady-state controller tracking error characteristics in response to different commanded input functions such as steps, ramps, and parabolas.
