Entomologia Generalis

We are only now beginning to understand how insect remains are useful, and indeed which insect species are most useful in which areas. Humans have had an enormous impact on the environment of the past, and we are just beginning to understand how geoengineering, how hunter-gatherer societies and even the Neolithic Agricultural Revolution impacted local ecologies.

General and applied entomology the journal of the Entomological Society of Australia (N.S.W.). (eJournal / eMagazine, 1978)

This developed through the course of the 18 th century and by the 19 th century most major universities were studying the world's insects and major scientific institutes began a systematic programme of research and investigation.

General and applied entomology; the journal of the Entomological Society of Australia (N.S.W.)

Beetles about 40% of all named insect species. Book Summary: The aim of writing this book has been to provide an account of the principles of insect behaviour for the post graduate students of Entomology and general Zoology of all the Universities and Research Institutions as well as to the research scholars engaged in the study of different aspects of Insect behaviour. Handlirsch 1908 and Wilson and Doner 1937 have reviewed the earlier attempts at classification, among which the schemes of Brauer 1885 , Sharp 1899 and Borner 1904 did much to define the more distinctive recent orders.

Applied Entomology and Zoology

Most interestingly, it seems that studying insects as a method of working out the perpetrator of a murder goes back to China in the 13 th century 16 when suspects were told to lay their sickles on the ground to see which attracted the most flies to the small amounts of blood that remained on the blade.
