A tribe might be grouped around a particular codebase that they maintain, or around one or more charismatic influence leaders, or around a language or development tool, or around a particular software license, or around a technical standard, or around a caretaker organization for some part of the infrastructure. In a last step, the tests are performed and the results documented. Moreover, through the use of an infrastructure bus and clean interfaces, the resulting software will be location-independent, enabling its distribution across a network.

System architectures for Industrie 4.0 applications

Following a similar idea of RASC, the PDIoT also provides an architectural design but for implementing power distribution systems, covering different domains, such as legacy grid systems, IoT and cloud computing. Because solutions are designed for specific business operations, they contain the highest amount of unique content in order to accommodate the varying people and processes of specific organizations.
