Genetic and Environmental Contributions to Facial Morphological Variation: A 3D Population

Baccetti T, Franchi L, McNamara JA Jr.

Morphologic relationship between the cranial base and the mandible in patients with facial asymmetry and mandibular prognathism

Given these inconclusive findings, we would like to raise one other issue—racial differences. We did not detect appreciable differences between TPS grids obtained with and without removing the effect of allometry.

Skull and face changes define modern humans

Positive angle suggests prominence of maxillary teeth relative to the mandible. All authors contributed significantly to this manuscript and have given final approval of the version to be published. Reconstructed lateral cephalograms RLCs were obtained from CBCT by lateral radiographic projection of the entire volume using iCAT Vision software Imaging Sciences International, Inc.

Evaluation of the morphometric covariation between palatal and craniofacial skeletal morphology in class III malocclusion growing subjects

AC measured the cephalograms and analyzed the data. Enhancer divergence and cis-regulatory evolution in the human and chimp neural crest. As suggested by Parcha et al.

Growth and Development of Craniofacial Complex I

Lopes MS, Bastiaansen JW, Janss L, Knol EF, Bovenhuis H. Early intervention requires an acceptance of a multidisciplinary approach to total

patient health. The continuing value of twin studies in the omics era.
