Here, we identified that chronic exposure to environmentally relevant doses of arsenic increased apoptosis, characterized by caspase-3 activation, poly ADP-ribose polymerase cleavage and Terminal deoxynucleotidyl transferase dUTP nick-end labeling of rat hippocampal neurons, marked by NeuN. B, Representative bar graph shows an increase in the number of errors % during learning, and a fall in memory retained % saving memory in the arsenic group and its restoration in arsenic + noggin group when assessed at 24 h, 48 h, and 7th day post-learning in Y-Maze test.

From the Cover: Arsenic Induces Hippocampal Neuronal Apoptosis and Cognitive Impairments via an Up

The target of this application is to help the public who need to hospitalize during the emergency. It is an eco-friendly waste management solution.

SSC CHSL Exam Pattern 2021, Syllabus, Marking Scheme, Books

Moreover, a direct correlation between the arsenic-induced apoptotic mechanism and cognitive losses is yet awaited. This project ensures the correct identification of the accident site in the nearest police station and hospitals and sends a notice. These writing were later compiled in two anthologies: Adab aur Inqilab and Raushan Minar.
