Department of Water Resources

This largely arid region receives less than 250 mm of rainfall each year, yet total water use for agricultural and economic activities has been steadily increasing. Examples are multipurpose reservoirs and the construction of dykes along coasts and rivers.

Water Resources Planning Act

The authors cover both basin-wide and urban water issues and present ways of identifying and evaluating alternatives for addressing multiple-purpose and multi-objective water quantity and quality management challenges.

Water Resources Planning Organization Job Circular August 2021

Dismantling part of the four Lower Snake dams will leave most of each dam whole. One of these facts is that surface water flows and aquifer storage volumes vary over space and time. Planners and managers must identify the trade-offs among environmental, ecologic, economic, and social impacts, however measured, and the management alternatives that balance these often-conflicting interests.

Water Resources

Given recent escalation of hydropower development in these basins, planning is needed to reduce biodiversity loss, as well as other adverse environmental, social, and economic impacts while meeting the energy needs of the basins. Change over time is certain; just what it will be is uncertain. This in turn may help us better manage and use our land and water resources for the betterment of all—now and on into the future.

Water Resources

If financial aid is to be provided, to be effective it has to address all the root causes of such poverty, not only the need for clean water.
