Instrumentation With Ultrasonic Scalers Facilitates Cleaning of the Sandblasted and Acid

Nonsurgical periodontal therapy: A review. Interim Domestic Infection Control Precautions for Aerosol-Generating Procedures on Patients with Severe Acute Respiratory Syndrome. After 3 years, the gain in bone probing levels after NSPT was gradually lost, most probably due to the absence of any additional professional subgingival instrumentation during the 5-year follow-up in these studies.

Efficacy of integrated ultraviolet ultrasonic technologies in the removal of erythromycin

The production of aerosols is an aspect of infection control that has had increased importance in recent years particularly in relation to the spread of influenza viruses.

Bacterial reduction of mature *Enterococcus faecalis* biofilm by different irrigants and activation techniques using confocal laser scanning microscopy. An in vitro study Mahfouze AL, El Gendy AA, Elsewify TM

Blood contamination of the aerosols produced by the in vivo use of ultrasonic scalers. This could be because tip 10P has the highest displacement amplitude and tip 2 has the least displacement amplitude; the latter has a larger cross-section area.

Efficacy of preprocedural mouthrinses in the reduction of microorganisms in aerosol: A systematic review

In addition, at each of these visits, the tongue was brushed with a 1% CHX gel for one minute, CHX spraying on tonsils and the mouth rinsed with a 0.
