Multi

In this study we evaluated a number of multi-criteria decision-making tools for their usefulness using incentive-based experiments, which is a novel approach in operations research but common in psychology and experimental economics.

situations. A web site can provide or not users' needs.

Triantaphyllou, E. (2000) Multi

The eighth chapter, which is the principal chapter of the book, presents a sensitivity analysis of MCDM methods. I am a Faculty Member at the New York University. It is especially useful for people who are interested in trying to find out which MCDM method is the best and who have used or intend to use the AHP method in their work or research.
