## Women With IC/BPS May Be at Elevated Risk of Pelvic Inflammatory Disease

They are recommended for women who have symptoms of breast cancer or who are at increased risk of developing the disease. They perform routine screenings to catch cancers and sexually transmitted diseases at an earlier stage.

## Digital assessment of the pelvic floor muscles: A neglected technique

Predictors of PE Experiences in Women With and Without Pain During Intercourse Predisposing Factors Younger women had more negative PE experiences than older women, perhaps because of their degree of experience. The elements of this exam include the , which contains the , of which there are two longitudinal folds of skin forming the labia majora; then the labia minora and hair follicles. The patient should tighten and relax her PFMs 10 times in a row at least 3 times a day.

## Hong Kong Chinese women's experiences of vaginal examinations in labour

Objective: to explore women's experiences during vaginal examinations in labour. Digital assessment, a simple but sometimes neglected technique, should be added to every pelvic examination, even if a patient does not have any UI or POP concerns. NPs may also need to remind the patient to avoid pushing against the stirrups to enhance her vaginal squeezing ability.

## Not so bad after all..., Women's experiences of pelvic examinations

Seven of the young women had had sexual relations. Clinical evaluation A short series of questions and a digital pelvic examination are all that are needed to diagnose most pelvic health problems and initiate a well-structured, conservative treatment plan.

## Prevalence of Potentially Unnecessary Bimanual Pelvic Examinations and Papanicolaou Tests Among Adolescent Girls and Young Women Aged 15

The objectives of this study were to estimate the prevalence of and examine factors associated with receipt of BPE and Pap tests among women

younger than 21 years in the United States and to estimate the proportion of these examinations and tests that are potentially unnecessary. In women, these structures are the urethra, the vagina, and the anal canal, the first of which regulates the flow of liquid waste and the lattermost of which regulates the flow of solid waste as these materials pass out of the body.
