If CRC passes, the CPU enters a routine 147 to see if a call-back request is included in the data in the packet 18, and if so then a timer is loaded at point 148 to begin counting down the period requested by the base station in the acknowledge packet. Wireless bar code symbol reading system having hand-supportable unit and remote base station 1998-12-03 2007-02-06 Metrologic Instruments, Inc.

ARP Table - IP to MAC mapping Layer 3 to Layer 2 Mapping MAC Address Table - MAC Address to Port Number mapping Layer 2 to Layer 1 Mapping Switches are interconnecting devices which are advance version of HUB.

**Circuit versus Packet Switching**

Check if the packet is to be monitored or trapped. Otherwise, when set to zero, it indicates the first or a middle packet in a packet stream.

**Digital Data Modes**

The 48-bit destination address 61 from an incoming packet is simultaneously subjected to the hash function 86 and a CAM match; if a CAM match is found in CAM 23, an index into the translation table 94 is immediately generated as indicated by the line 100. Add a timestamp field 82 and the remaining header 63 fields to form a switch frame 55.

java

The computer is responsible for managing network connections, formatting data as AX. This code value may be changed in the decoder 117 by loading a new binary number from the CPU 30 via interface 85 using the port bus 32b and input 118.

US5390173A

The CAM lookup consists of applying an address or value to the CAM 23, and getting back an indication of whether or not a match is found in

Dynamic service insertion in a fabric switch 2012-03-22 2018-02-06 Brocade Communications Systems LLC Overlay tunnel in a fabric switch 2012-03-22 2015-10-06 Brocade Communications Systems, Inc. In an illustrative embodiment, the central station includes a number of base stations located indifferent rooms or areas, with all of the base stations connected to a central computer, either by a wire connection or by a similar RF link. A communications adapter 25 couples the CPU 20 via main bus 22 to the link 11.

### **What Are Packet Sniffers and How Do They Work?**

The previous hop link field 73 is a 7-bit field representing the physical link number of the previous hop link. .
