**Michael Faraday was Sir Humphry Davy's greatest discovery**

There he discovered the physiological properties of nitrous oxide laughing gas, which established his reputation as a chemist.

**Humphry Davy Stock**

John Snow showed that cholera is transmitted in water, but they were not sure how.

**Erowid Psychoactives Vault : Psychoactives in History**

The velocities of nebulae increase with distance. He claimed that Britain now lead the world in Chemistry which had become the chief experimental science of the day, including work with voltaic batteries.

**Sir Humphry Davy**

They stood together on the edge of the crater of the volcano Vesuvius and were half choked by fumes and nearly burned alive by showers of molten rock. He also described the preparation of boron, for which at first he proposed the name boracium, on the impression that it was a metal.

**Technology in the Modern Ages**

Interaction is mostly done using touch, besides a few physical buttons. He was the eldest of five children of parents who owned a small, less-than-prosperous farm. The Davy lamp was designed in such a way that it was unable to do this, and thus its introduction in 1816 saved many lives.
