Manuals/Instructions for Use

Some facilities allow employees to rinse contaminated laundry i.

Instruction Manuals

Role of the environment of the operating suite in surgical wound infection.

Environmental Cleaning Procedures

Damp dust with a facility-approved agent the overhead operating lights, furniture, and all flat surfaces, and damp dust the tops and rims of the sterilizer and the countertops in the substerile room.

Environmental Cleaning Procedures

The determination of environmental cleaning procedures for individual patient care areas, including frequency, method, and process, should be based on the risk of pathogen transmission. The lead author requested additional articles that either did not fit the original search criteria or were discovered during the evidence appraisal process. Any surface, living or inanimate, can serve as a vector, or carrier, of a harmful substance.

Manuals/Instructions for Use

Low-quality evidence was excluded when higher-quality evidence was available, and literature outside the time restriction was excluded when literature within the time restriction was available. Thoroughly clean and disinfect portable patient-care equipment that is not stored within the operating room, such as suction regulators, anesthesia trolley, compressed gas tanks, x-ray machines, and lead gowns, before introduction into the operating room.

Cleaning

In this process, cultures are taken by swabbing or use of RODAC or contact agar plates after an item is cleaned.

Environmental Cleaning

Hospital eTool: Housekeeping

Decontamination of the above should use the following process: Clean gloves must be worn during the cleanup process. Frequency and process is the same for adult, pediatric and neonatal units, but there are specific considerations for neonatal areas.
