Better care needed for people displaying first symptoms of bipolar disorder

In the most severe cases, people lose their appetite, are unable to sleep, and have thoughts that circle around death and suicide. Mostly, the type is determined by doctors depending on the location of the disease. These symptoms interfere with daily life, and in severe cases, a person may need to go to the hospital.

Breakthrough Research Identifies A Potential Treatment For Ulcerative Colitis

But the knowledge that tamoxifen is beneficial helps towards a better understanding of the condition. We examined the demographics, psychiatric symptoms, clinical course, and response to treatment with medications and electroconvulsive therapy ECT.

Medications for Mania & Bipolar Disorder

We do not guarantee individual replies due to extremely high volume of correspondence. Less severe manic periods are known as hypomanic episodes. Sufferers typically alternate between these extreme states, with normal mood states in-between.
