## Lung Deposition of BDP/Formoterol HFA pMDI in Healthy Volunteers, Asthmatic, and COPD Patients

Overall, the incidence of ILD is likely to be higher than we have identified and the prognosis worse due to reporting bias.

## Lung Deposition of BDP/Formoterol HFA pMDI in Healthy Volunteers, Asthmatic, and COPD Patients

A further sensitivity analysis confirmed that the study of Tse et al. A sample size of 8 subjects to detect differences in lung deposition between groups of approximately 30% paired t-test , was roughly estimated on the basis of a previous study showing a deposition of formoterol HFA of 35 ± 7% in patients with severe COPD. An 81 mKrypton-ventilation scan was also obtained to define the lung borders and lung fields.

## Histoplasmosis Case Report and by Johnson Britto

Abstract In this case report we describe a case of pulmonary histoplasmosis in a healthy adult female living in Kentucky.

## Advanced Chronic Obstructive Pulmonary Disease: Innovative Approaches to Palliation

The effect of N-acetylcysteine on exacerbations of chronic obstructive pulmonary disease: a meta-analysis and systematic review. Even among those receiving CSs as part of the RTX regimen, no relationship was found for a more favourable outcome or avoidance of mechanical ventilation or death. In addition, as both BDP and formoterol in the extrafine formulation under investigation have a similar particle size distribution in vitro, it is likely that, in vivo, they are codeposited throughout all districts of the bronchial tree.

## Non

As both drugs are dissolved in solution it was assumed that the radioactivity was evenly distributed between the two drugs. It is important that the therapeutic agent reaches the lung periphery for several reasons. The mean time of onset, from the last RTX infusion until symptom development or relevant abnormal radiological change was 30 days range 0—158 days.

A Review of the Non Pharmacologic Management of Chronic Obstructive Pulmonary Disease :: Science Publishing Group

Calzetta L, Matera MG, Braido F, Contoli M, Corsico A, Di Marco F, Santus P, Scichilone N, Cazzola M, Roglani P, Lindgren S, Bake B, and Larsson S: Clinical consequences of inadequate inhalation technique in asthma therapy. Wu W, Liu X, Wang L, Wang Z, Hu J, Yan J.

#### **Lung Deposition of BDP/Formoterol HFA pMDI in Healthy Volunteers, Asthmatic, and COPD Patients**

Results Data obtained from 2753 COPD patients were extracted from 7 RCTs published between 2004 and 2017. Calzetta L, Ora J, Cavalli F, Roglani P, O'Donnell DE, Cazzola M, Barnes PJ: Scientific rationale for inhaled combination therapy with long-acting beta<sub>2</sub>-agonists and corticosteroids.
