Observations of mount etna seismicity during the 2002

Despite the frequent occurrence of marine mammal sounds, no examples of fish sounds were identified. Longer term time-series observations are increasing through the development of deep-sea observatories such as Neptune Canada Juniper et al.

[PDF] Acquisition And Processing Of Marine Seismic Data

We consider four interesting geophysical phenomena found at the EMSO sites that are related to geo-hazard. Motivated by these considerations, we address the problem of single underwater target positioning based on acoustic range measurements between the target and a moving sensor at the sea surface.

Mission results from the first GEOSTAR observatory (Adriatic Sea, 1998)

The MBARI Margin Seismology Experiment: a prototype sea floor observatory D.

Science Technology Synergy for Research in the Marine Environment: Challenges for the XXI Century, Volume 12

Yet, the scale and the nature of such impacts are unknown at present. The forum periodically issues a roadmap with a list and description of strategically important RIs to be Conclusions The establishment of the EMSO network of seafloor observatories will represent a change of direction in Ocean science research, and will require a major investment of human and economic resources over many decades.

Activity syndromes and metabolism in giant deep

Within the FP7 Programme launched in 2006, a call for Preparatory Phase PP was issued in order to support the foundation of the legal and organisational entity in charge of building up and managing the infrastructure, and coordinating the financial effort among the countries. A total of 74 credit hours are required for this two year program. Despite growing interest, the behavioural ecology of deep-sea organisms is largely unknown.

Environmental conditions for gravelly and pebbly dunes and sorted bedforms on a moderate

The formulated failure criteria for air-entrained concrete can be used, e. Bethoux, Data analysis from SIS-BALIG II OBS array in the Ligurian Sea, Proceedings of the International Workshop Multidisciplinary Observatories on the Deep Sea Floor, edited by J. She is presently Local Project Manager of the NEAREST EC Project, WP responsible and member of the Steering Committee of the ESONET EC Network of Excellence and is in the Coordination Team of the EC EMSO-PP projects.

INGV Roma2

We present a review of our work on data acquired by GEOSTAR-class GEophysical and Oceanographic STation for Abyssal Research observatories deployed at three EMSO European Multidisciplinary Seafloor and water-column Observatory; sites in southern European waters where strong geo-hazards are present: the Western Iberian Margin, the Western Ionian Sea, the Marmara Sea, and the Marsili basin in the Tyrrhenian Sea. She has published over 20 papers on international journals and proceeding volumes.
