Microbial growth on C1 compounds. 5. Enzyme activities in extracts of Pseudomonas AM1

Monochloroamine, one of the chloramines, is derived from ammonia by the replacement of one hydrogen atom with a chlorine atom.

Microbial growth on C1 compounds. 2. Synthesis of cell constituents by methanol

Other phenolics can be derived from creosote, a component of coal tar. The main bioconversion product of coniferyl aldehyde was ferulic acid, which is formed by oxidation of the aldehyde group to a carboxylic acid group.

Microbial growth on C1 compounds. Incorporation of C1 units into allulose phosphate by extracts of Pseudomonas methanica

However, because of concerns about using mercury compounds, these antiseptics are no longer sold in the United States. Physiological studies on acid metabolism.

Chemical Synthesis from C1 Compounds

The metabolism of C2 compounds in micro-organisms.

Microbial growth on C1 compounds. 2. Synthesis of cell constituents by methanol

FH is a professor with focus on biotechnology and bioengineering for efficient production of bacterial cellulose and enzymes from low-value renewable biomass, as well as applications of BC in biomedicine and functional materials. SYNTHESIS OF CELL CONSTITUENTS BY METHANE- AND METHANOL-GROWN PSEUDOMONAS METHANICA. The cationic charge of quats appears to confer their antimicrobial properties, which are diminished when neutralized.

Microbial growth on C1 compounds. 3. Distribution of radioactivity in metabolites of methanol

Nitrites are added to processed meats to maintain color and stop the germination of Clostridium botulinum endospores. Studies on Pseudomonas methanica Söhngen nov.
