## Earth

We also consider the formation of the Moon from an Earth—Theia mixture, but do not directly quantify the probabilities of large extents of mixing or post-impact equilibration since these hypotheses are sensitive to different processes e. Causes and Environmental Implications of Increased UV-B Radiation. By bringing together top experts and authors, this archaeology website explores lost civilizations, examines sacred writings, tours ancient places, investigates ancient discoveries and questions mysterious happenings.

## How scientists are piecing together the history of the moon

Stuart Lewandowsky, Stephan Skuce, Andrew G. There are also inoperative satellites, including , the oldest satellite currently in orbit, and over 16,000 pieces of tracked.

## How Was the Moon Formed?

Early edition, published online before print. Earth: Evolution of a Habitable World second ed.

## Scientists Have a Crazy New Hypothesis About The Origin of The Moon

This book remains the prime reference on this subject. For bodies near the , this is equivalent to an apparent diameter of the Sun or the Moon every two minutes; from Earth's surface, the apparent sizes of the Sun and the Moon are approximately the same. Half of that land area is desert 14% , high mountains 27% , or other unsuitable terrains.

## The origin of the Moon and its composition

Forming the Moon out of 90% Theia + 10% Earth increases this probability to 3. Our giant impact hypothesis had the advantage of invoking a stochastic catastrophic event that might happen only to one or two planets out of nine. These probes were designed to photograph the lunar surface at increasing levels of detail before crashing into the surface.
