Instruction and data fetches can be performed in parallel. The C2000 devices are highly configurable and provide the control functions of sensing, processing, actuation, and connectivity. The goal of this book is to provide a cohesive and well-balanced set of contributions dealing with important aspects and applications of microprocessors to signal processing, measurement and system control.

John Smith's

The invention and wide applications of microprocessors have changed the philosophy of the signal processing, measurement and control engineering fields.
