RET in breast cancer: pathogenic implications and mechanisms of drug resistance

The CYPs are broadly divided into xenobiotic CYP1-4 and endogenous CYP7-51. Longevity of the hypopituitary patients from the island Krk: a follow-up study.

Hormone resistance in breast cancer linked to DNA 'rewiring'

Lei JT, Gou X, Seker S, Ellis MJ. While different cancers demonstrate their own patterns of cell plasticity, NCI-funded research has revealed some biological mechanisms that are common across cancer types. The BRAFV600E inhibitor, PLX4032, increases type I collagen synthesis in melanoma cells.

Chemoresistance mechanisms of breast cancer and their countermeasures

The ER signaling pathway represents a complex cascade of events with several regulators and comprehensive crosstalk with and between pathways, thereby resulting in the emergence of endocrine resistance. Outside the circle: activation of RET.
