The authors interweave numerous anecdotes about the personalities involved in the discoveries with technical details of the mathematical ideas themselves. Moreover, if the system in question is nonlinear, then the faithful model assumption raises difficulties for inferring the determinism of the target system from the deterministic character of the model.

However, note that some crucial assumptions are being made here.

**Princeton Science Library**

Although not well explored in the context of chaos, there are interesting questions regarding both topics deserving of further exploration. However, a many-to-one mapping raises problems.

His adversaries would revel in his misery. In 1888, the 34-year-old Henri Poincaré submitted a paper that was to change the course of science,

but not before it underwent significant changes itself.
