Lee Mac Programming: Custom Programs for AutoCAD

DOS doesn't know what a USB port is, so if your mouse is a USB mouse - forget it. This update hopefully implements a fix for the scripting bug present in previous versions of the program, and also offers the user the ability to select multiple attributed blocks from the active drawing whose attribute values may be added to the list of items to be modified.

I invite you to the app at your earliest convenience! The book contains hands-on lessons which show how to create and work with realistic technical drawings, use printers and plotters and master the essentials of working in 3-D and more. The new version of the program will now exclude attributes from the trimming operation, and will trim objects surrounding blocks whose insertion points do not lie on a curve object in previous versions such objects were not trimmed. You can change the view by creating a new view box in the Aerial View window.

Residual Value of Release 12 C3

The idea was spawned from a question received from a visitor to my site who was looking for a consistent result when double-clicking on MText and single-line text DText.

Another common error is to mis-spelled symbols. This expression controls the while expression.

Residual Value of Release 12 C3

This reactor-driven application will silently run in the background and will automatically display the number of objects in the active selection at the AutoCAD status bar, offering an alternative to the Quick Properties functionality available in newer versions of AutoCAD. My very old program has been completely rewritten to vastly improve the readability of the code and to fix a few general bugs. I have now fixed the reported bugs and have updated the program to.
