Darwin's Radio

Bear's main characters include Kaye Lang, a gifted and recently widowed biologist who is drawn into the maelstrom because she published a paper some years back anticipating reawakened HERVs; Christopher Dicken, a field man with the CDC who has been investigating incidents in eastern Europe over several years that appear to be early SHEVA outbreaks; and Mitch Rafelson, a discredited anthropologist who has found surprising prehistoric remains in the Alps that suggest SHEVA, or something very like it, has struck before.

Greg Bear: Books: Darwin's Radio

But it isn't the best time he's done it either. Medical tests that determine symptoms of disease by measuring the levels of a protein rely on regulation of protein production in our bodies, and the action of hormones is usually to affect the production of one or many proteins. Maybe this part was like porn for readers who are pro mountain climbers, but as a layperson I was bored to tears and ready to gouge my eyes out.

SF tech.radiozamaneh.com: Darwin's Radio / Greg Bear ☆ ☆ ☆

I cannot give higher praise. Don't try to follow… and don't try to look for a lot of plot in these monologues. Molecular biologist Kaye Lang has spent her career tracing ancient retroviruses in the human genome.

Darwin's Radio (Darwin's Radio #1) by Greg Bear

And with scary echoes of what it's like to be in a pandemic and with odd government responses. An evolutionary puzzle that will determine the future of the human race.
