Dave is part of the core development team for Mason.

HTML::Mason::Compiler

Subcomponents and methods are covered in.

Embedding Perl in HTML with Mason

As of this very moment, Mason does not provide a workaround for this problem, but it will in a near-future release and perhaps already has by the time you are reading this. The embedded tag gets replaced with the return value of its contents, evaluated as a Perl expression.

HTML::Mason::Compiler

Several parameters can change how elements of this process happen, and you can replace the core Mason classes with your own customized subclasses for specialized behavior. In addition, we will make sure to report any errata found in the published edition s , as well as providing downloadable versions of all of the source code found in the book. Used to create subcomponents i.

Embedding Perl in HTML With Mason (豆瓣)

The value can be any Perl expression whose results can fit into a scalar such as a number, string, reference, or undef. But Mason does not simply stop at HTML. Template variables can be passed explicitly to the template for substitution or drawn from Perl variables in a specified Perl package.

HTML::Mason::Compiler

What I was trying to achieve was meant to be achieved by the delivered. No Perl code is ever embedded within templates, and control structures like if, include, and various loops are all implemented by custom HTML::Template tags. He also wants to thank DoTheGood, Inc.
