It is also the case that the R 2 of the estimated earnings function is considerably larger in the nonunion sector than in the union sector, which is also consistent with the view that observable individual characteristics are a relatively more important determinant of wages in the nonunion sector than in the union sector.

Learning and skills

Given that unions are more common in large firms than in small firms, this might reflect the well-known firm-size wage differential where large firms pay higher wages than small firms Brown and Medoff 1989. Use stats on social media to illustrate your values and why you are fighting.
