There are three methods of GPS measurement that are utilised by surveyors. Schellinger Call routing system for a wireless data device 1994-06-24 1996-01-12 Matsushita Electric Ind Co Ltd Radio telephone system 1994-09-28 1997-02-11 Us West Technologies, Inc.

Combining geodetic and geomorphic methods to monitor restored side channels: Feedback from the Upper Rhine

In Step 2, the TCP or IP connectivity between the FAP 2510 and INC 2515 is lost e.

2 The Geodetic Reference Framework

Trigonometric leveling In the trigonometric leveling is with surveying instruments theodolites, total stations, etc. Optionally, if the page for PS services was received, the UE responds in Step 5 to the SGSN via the FAP with a Service Request message indicating PS paging response. The roving antenna then applies those corrections to the GPS signals it is receiving to calculate its own position.

Surveying

The station is either a trigonometric or traverse station.

A new re-authentication identity may be chosen and protected i. In this sequence diagram, it is assumed that the FAP holds a SIM and EAP-SIM will be used.

Geodesy

This indicates that under certain circumstances inertial surveying can produce accuracies equivalent to those of conventional second-order traversing. The FAP 2310 also releases in Step 4 the UE specific TCP connection to the INC.
