Embracing Internationalization in Software Applications

Internationalization is the process of designing a software application so that it can be adapted to various languages and regions without engineering changes. Vahlne JE and Johanson J 2013 The Uppsala model on evolution of the multinational business enterprise: from internalization to coordination of networks. The theoretical contributions of this research are to offer a descriptive approach to the new phenomenon formed by international born-digital firms, and to help develop the corresponding firm typology.

Internationalization and localization

XDXF is a project to unite all existing open dictionaries and provide both users and developers with universal XML-based format, convertible from and to other popular formats like Mova, PtkDic, StarDict, ABBYY Lingvo etc. We provide personalized support to help each customer streamline their operations and share transparent results with their clients in real time.

Internationalization and Export of Software Products

Companies can choose between the following strategies: standardised, localised or customised. Likewise, units in America are measured in feet or miles, while in Europe and Canada they use the metric system.

The strategic orientations of rapidly internationalizing software companies

Software Without Frontiers: A multi-platform, multi-cultural, multi-nation approach. Chetty S and Holm DB 2000 Internationalization of small to medium-sized manufacturing firms: a network approach. Then, the Open Source Initiative OSI , the organization best known for deciding what is and what is not open source, is planning to reform its licensing policy.

The internationalization of small computer software firms: A further challenge to "stage" theories

It is clear that other factors than number of internet users drive localisation decisions.
